Wetzel's *Leucostethus* is a very pale yellowish-green, with a few small black spots on the head and neck.

Leucostethus leucostethus

This is a pale yellowish-green with a few small black spots on the head and neck. The body is covered with numerous small black spots, which are larger on the head and neck. The dorsal surface is smooth, while the ventral surface is slightly rough. The skin is thin and delicate, with a slight texture. The body is elongated and slender, with a pointed snout. The eyes are large and prominent, located on the sides of the head. The mouth is small and located at the front of the head. The nostrils are located on the sides of the snout. The body is covered with numerous small black spots, which are larger on the head and neck. The dorsal surface is smooth, while the ventral surface is slightly rough. The skin is thin and delicate, with a slight texture. The body is elongated and slender, with a pointed snout. The eyes are large and prominent, located on the sides of the head. The mouth is small and located at the front of the head. The nostrils are located on the sides of the snout.
