1940-10-10  
Dear Dr. G. M. Smith,  
I am sending you a copy of the Journal of the American Medical Association for October 10, 1940, containing an article by Dr. W. H. Howell, of the Mayo Clinic, Rochester, Minnesota, entitled "The Effect of Alcohol on the Human Heart."  
This article is based on a study of 1,000 patients who had been admitted to the Mayo Clinic during the past 10 years, and it shows that the incidence of heart disease was 20% greater among those who had been drinking alcohol than among those who had not been drinking.  
The article also states that the incidence of heart disease was 20% greater among those who had been drinking alcohol than among those who had not been drinking.

It is my opinion that this article is of great interest to you, and I hope you will find it helpful in your work.  
Very truly yours,  
John C. Smith  
Physician
